

Readme

World Scientific has produced a style/template document for Latex2e, which will allow authors to prepare manuscripts that can be brought directly into the World Scientific production process for CRC titles of the proceeding size [9 in x 6 in]. This will enable more accurate production of page proofs, reducing your need during proofreading to locate typographic mistakes.

The World Scientific Latex2e class file and the sample coded files are located on the website in a zip format called ws-procs9x6_2e.zip. Download and unzip this. Once unzipped successfully, you will find the following files:

procs-readme9x6_2e.pdf	:	preliminary guide
procs-instruction9x6_2e.pdf	:	general instructions for authors
procs-fig1.eps	:	figure/image file
rotating_pr.sty	:	sty file for landscape figures and tables
ws-procs9x6.cls	:	Latex2e class file
ws-procs9x6.tex	:	main text file
ws-procs9x6.pdf	:	sample typeset pages of the above

The complete set of tex sample coded files was supplied to enable authors to use it as a template and for ready reference. With this class file you can use any package that comes with the standard Latex2e distribution to avail different features.
